Re: Support for KatloTech World Wide Fiber Network

On behalf of Quintillion Subsea Operations, LLC and Quintillion Networks, LLC (Quintillion) we wish to convey our support for the vision to enhance and contribute to the betterment of Canada's First Nations community through advancing fiber optic communications and green modular data centers throughout the NWT.

In December 2017 Quintillion completed construction of our Phase 1 system, a subsea fiber optic cable connecting Alaskan Arctic communities of Utqiagvik, Wainwright, Point Hope, Kotzebue, and Nome, AK, with Prudhoe Bay, and Fairbanks, AK via a terrestrial fiber cable system. Our plans include system extensions to Asia and Europe, as well as construction of an Arctic data center in the Prudhoe Bay area. More information can be found at www.qexpressnet.com.

We are excited to pursue a unique and mutually beneficial relationship that benefits Canadian and United States consumer, commercial, and government clientele, by interconnecting existing and planned fiber optic networks in NWT with the Quintillion Phase 3 system. We also look forward to working with KatloTech Communications and their team of specialists to help implement the first Arctic data center(s) to serve North America, and the shared vision to build a better and more sustainable North American Arctic technology infrastructure that ultimately connects this region to both European and Asian markets, on the fastest, lowest latency, 100% fiber optic route.

Sincerely,

Matt Peterson
VP, Network Management
