CRTC Funding and Regional Project Support

Re: Fibre Optic and Communications Network for NWT, Northern BC, Northern AB

Rigstar Industrial is pleased to endorse the KatloTech Communications plan for building and supporting a wholly owned Indigenous Transport Network. To provide the residents and communities in these areas access to high speed broadband service is essential to close the gap that exists in these remote regions and to the Indigenous communities in these areas who have been significantly underserved.

This fibre transport network and data centers will help enable the communities and businesses to thrive and allow for future technology development and through the wholly owned Indigenous corporation, our organization sees the maximum return will stay within the communities to assist with job creation and overall economic growth.

The Rigstar team fully supports this initiative and welcomes opportunities to further collaborate and connect projects we have underway that may be able to connect similar remote territories for an even more expansive and integrated transport network.

All the best,

Coralee Mazurek
