## 30 Year Partnership between Katlo Tech Communications, First Nations Community, & Electric Air

Electric Air & Marine Inc. (EAM) and its subsidiaries have come to an exclusive 30 year partnership with Katlo Tech Communications of NWT (KATLO), for development and deployment of Canada’s next generation Advanced Aerial Mobility network known as “20g Air”, throughout Canada’s North, the Territories, & Western Canada, to support Hel eCrane SESCOAN and “50g Air”, known as “Flying Hair”, to support ehPlane passenger transport.

In this partnership, KATLO will be the exclusive network provider, and have first right of refusal to further opportunities for network building, network ownership, network operations, and network administration in the above mentioned territories with EAM subsidiaries. Additionally a new Canadian company has been formed called AAM Networks Inc. under which KATLO will hold 60% and EAM 40% respectively, through which all related IP for 20g Air, & 50g Air products & services will be developed, held, sold and exported.

In return EAM and its subsidiaries receive exclusivity and first right of refusal for establishment and support of further business operations on their network and agreed upon premises.

This partnership paves the way for thousands of new jobs in Canada’s North, the Territories, & Western Canada collectively, pioneering the development and export of new technologies and infrastructure for the future of the Canadian & global economy, with First Nations involvement. It secures key support and infrastructure required for EAM’s further plans to deploy Canada’s next generation hydrogen refueling and electric charging in aviation for eVTOLs, and ehVTOLs such as ehPlane <http://ehplane.com>, Hel eCrane, & Hel eCrane H2 <http://helecrane.com>, and develop aerial delivery corridors for Hel eCrane to and from Canada’s North & Territories, to the ports of British Columbia.
